Energiequelle GmbH opens new office in Münster

Münster is 18th branch office of the international project developer in Germany

Münster, 14 December 2023. Energiequelle GmbH celebrated the opening of its new office in Robert-Bosch-Straße in Münster this week. The newly selected location stands out as a liveable university city with excellent transport links and benefits from the short distance to the key regions for wind energy. The office offers space for around 10 - 12 employees, six of whom have already moved into the new premises. It also has a conference room and various charging points for electric vehicles.

Despite the high population density, there is an interesting market in North Rhine-Westphalia to further expand and strengthen our position in the wind and PV sector. Energiequelle has been active in North Rhine-Westphalia for some time and numerous projects are in the pipeline.

Marco Richter, the new head of the project team in North Rhine-Westphalia, is confident: "The state government is pursuing the goal of designating 1.8 % of the state's land area for wind energy by 2025. Here in Münster, the direct proximity to partners, property owners and political decision-makers is a great advantage."

With a total of 24 branch offices in Germany, France, Finland and Poland, Energiequelle is on a sustained international growth course. The company currently employs more than 500 people and has connected more than 1,600 MW to the grid to date.
